DELTA Profi-Box

Clever storage at the installation site

The DELTA Profi-Box represents functionality, as well as savings in terms of time and transport. It thus helps to protect the environment, and also our resources by using less packaging. Around 35% less volume compared to conventional packaging also saves a third of the space. This applies in terms of both transport and storage. Less space taken up in the lorry and less packaging leads to a reduction in CO₂. And that is good for us and good for the environment.

Inside the Profi-Box is the DELTA line switch range, which impresses with its perfect proportions, elegance and attractive design. The box is available in four different variants. This means that only boxes that will be used at the installation site can be selected. The unpacking and installation of materials is very quick, as individual packaging is no longer necessary. And once the work is complete, the waste can be collected in the box and subsequently separated for quick disposal.

Price adjustment compared to standard packaging

Protection of the environment by reducing the packaging

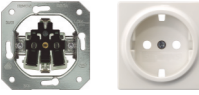

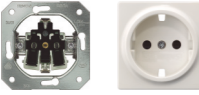

Time savings due to more efficient commutes

Around 30% less storage space

DELTA Profi-Box variants

	Item no.	Description	Price group
 100x 100x	STA2156-OKE	100 units, DELTA switch insert UP, two-way switch, 5TA2156 100 units, DELTA rocker i-system for universal switch, electrical white, 5TG6271	19A
